**WHAT IS TELEMATICS?**

Telematics involves the placement of computer devices into autos to capture data used to monitor driver efficiency and safety.

To be eligible for a premium credit, the Telematics program must have these features to improve safety:

* Monitor speed, harsh acceleration and harsh breaking.
* Compare individual performance against performance of an entire fleet.

A Telematics program may have other features beneficial to the business like:

* monitoring fuel efficiency
* tracking auto locations
* planning delivery routes
* monitoring maintenance needs

These alone do not qualify for a Telematics program credit.
